L'idea

Package: gedit

Section: gnome

Tags:
Kind of user interface: X11,
Prog. language used to make the package: C,
Suite: Gnome,
User interface toolkit: GTK,
Use: Editing,
Works with: Text,
Works with: Unicode text
Cosa c'è in Debtags

- A tag vocabulary stored in svn;
- A central tag database that everyone can edit;
- A hand-reviewed authoritative database stored in svn;
- Tag data stored in the Packages file
- Indexed tag data for fast access (in /var/lib/debtags)
- Code.

Tool a linea di comando

DEBTAGS(1)

NAME
debtags - Manage package tag data in a Debian system

SYNOPSIS
debtags [options] [command] [args...]
TAGCOLL(1)

NAME
tagcoll - perform various operations on tagged collections.

SYNOPSIS
tagcoll [options] [command] [arguments...]
Package: **libtagcoll-dev**  
Description: *Functions used to manipulate tagged collections*

Tagged collections are collections of items tagged with multiple categories.

libtagcoll provides general infrastructure to handle tagged collection data, plus various kind of manipulation functions:

- apply various kinds of transformations to the collection;
- generate and apply tag patches;
- discover and show implicit hierarchical relationships between tags;
- organize the collection in an intuitively navigable hierarchy;
- keep an on-disk index of the tag data.
Librerie C++

Package: **libapt-front-dev**

Description: *High-level library for managing Debian packages*

libapt-front is an high-level wrapper for libapt-pkg and libdebtags that makes it easier to develop package-aware applications such as package managers.

libapt-front is a joint effort by the debtags, adept and synaptic teams.
Applicazioni

Package: adept
Description: Package manager for KDE

Adept is a graphical package management tool based on the libapt-front API and KDE libraries. Adept is in alpha version, but already enables you to install, upgrade and remove software packages in a user friendly way.

Besides these basic functions the following features are provided:

• Search and filter the list of available packages (debtags support!)
• Perform smart system upgrades
• Edit the list of used repositories (sources.list)
• Configure packages through the debconf system
Package: debtags-edit
Description: GUI browser and editor for Debian Package Tags

debtags-edit is an experimental GUI program for browsing the Debian package archive and tagging packages. Its purpose is to make it easy and fast for everyone to update tag data.

Even if the program is still in the state of a prototype, it can already offer new and interesting package search functions, perform local customizations of the tag database and send local modifications for inclusion in the central tag archive.
Applicazioni

Package: **packagesearch**
Description: *GUI for searching packages and viewing package information*

Package: **aptitude**
Description: *Terminal-based apt frontend*

And tags show up in apt-cache as well, and can be used in grep-dctrl, and maybe also in some other place I don't know yet.
Applicazioni web

http://debtags.alioth.debian.org/cgi-bin/search.cgi
http://debtags.alioth.debian.org/cgi-bin/index.cgi
http://debtags.alioth.debian.org/cgi-bin/edit.cgi?pkg=X

Central database  

Hand review  

Subversion  Packages file
Da fare

- Trovare modi più agili per approvare i tag
- Refactoring del database centrale
- Fare interfacce più semplici ai dati (per esempio: indice dei giochi)
